

NISO RP-37-2021

# JATS4R Funding

Version 1.3

*A Recommended Practice of the  
National Information Standards Organization*

### About NISO Recommended Practices

A NISO Recommended Practice is a recommended "best practice" or "guideline" for methods, materials, or practices in order to give guidance to the user. Such documents usually represent a leading edge, exceptional model, or proven industry practice. All elements of Recommended Practices are discretionary and may be used as stated or modified by the user to meet specific needs.

This recommended practice may be revised or withdrawn at any time. For current information on the status of this publication contact the NISO office or visit the NISO website ([www.niso.org](http://www.niso.org)).

# Funding

**Status:** Published

**Version:** 1.3

## Provenance

Version 1.2 was updated as a result of the release of NISO JATS 1.3. This was then reviewed by the JATS4R Steering Committee.

JATS4R sub-group. Members (listed in alphabetical order):

Jeff Beck, NCBI, Mark Doyle, American Physical Society, Patricia Feeney, Crossref, Melissa Harrison, eLife (Chair), Chuck Koscher Crossref, Kirsty Meddings Crossref, Evan Owens, Independent Consultant, Alexander Schwarzman, The Optical Society.

## Change history

Version 1.3 includes updated instructions to reflect new elements <award-name> and <award-desc>. and new attribute @award-id-type attribute on <award-id> in JATS 1.3.

Version 1.2 can be found [here](#).

## History

**Steering Committee review:** September, 2021

**Published:** October 18, 2021

## Description

Crossref convened a working group to produce a recommendation for best practice of funding tagging, which resulted in some change requests to the NISO JATS DTD. These have now been made, so JATS4R created a subgroup to create a JATS4R recommendation.

Traditionally, funding information has been held within the acknowledgments section of an article in an unstructured format. As machine readability and re-use of this information have become more critical, publishers and funders require a way to structure this information for mining and re-use, and for this information to be sent to Crossref. It is recommended that publishers use the following recommendation to produce structured funding metadata. The focus of this recommendation is to ensure that a strict tagging model for funding information within the metadata of the article (or a sub-article) is provided in the XML for machine-readable reuse, although this doesn't preclude also using a looser, mixed content tagging model within descriptive text that might appear in, for example, an acknowledgment section of an article.

There are many combinations of funders, awards, and people associated with a research item. For example, we encountered samples with:

- One funder and multiple awards
- Multiple funders and one award
- One funder, multiple awards, and multiple people
- Multiple funders, one award, and multiple people

Non-monetary support is outside the scope of this recommendation.

The recommendation allows content to be repeated in the metadata markup, but best supports the four use-cases we found and was considered to be a favourable solution to prevent ambiguity.

This recommendation is for JATS 1.1 and later. We've not written it for JATS 1.0 because some elements and attributes have been added in 1.1 that support the information that needs to be collected.

## Context

<article-meta>, <front-stub>, <support-group>, <funding-group>, <award-group>, <funding-source>, <award-id>, <institution-wrap>, <institution>, <institution-id>, <principal-award-recipient>, @country, @institution-id-type, @vocab, @vocab-identifier, @id, <contrib-id>, @contrib-id-type

JATS 1.3 includes new elements <award-name> and <award-desc> and new attribute @award-id-type attribute on <award-id>

## Recommendation

DTD versions: JATS 1.1, 1.2 and 1.3

1. **<funding-group>**. All funding data should be contained in a single <funding-group> located either in <article-meta> or inside <support-group> (introduced in JATS 1.2) within <article-meta>.

Exception: Should the article contain a <sub-article> and the funding of this is distinct from and does not inherit that of the main article, an additional <funding-group> should be contained within either <front-stub> or <support-group> (introduced in JATS 1.2) within <front-stub>.

[[Validator tool result: more than one <funding-group> found within <article-meta> ERROR]]

[[Validator tool result: more than one <funding-group> found within a single <front-stub> ERROR]]

2. Multiple **<award-group>**s are allowed within <funding-group>. Each <award-group> must contain one <funding-source>; <funding-source> can have zero or multiple <award-id>s (if more than one, must be from the same funder).

[[Validator tool result: more than one <funding-source> found within <award-group> ERROR]]

[[Validator tool result: no <funding-source> or <support-source> found within <award-group> ERROR]]

3. **<award-id>**. If an award is a joint award from multiple funders, each using the same <award-id>, then each funder should appear in its own <award-group> and the <award-id> should be repeated in each.
4. When available, **<award-id>** should be used to record the grant or award provided by the funder.
5. **@award-id-type**. Crossref has introduced Grant Identifiers (DOIs assigned to individual grants by participating funders) and @award-id-type attribute was added to the content model for <award-id> in JATS 1.3. . <award-id award-id-type="doi">10.13039/501100001824</award-id>

[[Validator tool result: value of @award-id-type="doi" starts with something other than "10." ERROR]]

6. **<funding-source>** should only contain one <institution-wrap>. <institution-wrap> is a wrapper element to hold both the name of an institution (<institution>) and any identifiers for that institution (<institution-id>).

If your content contains a compound funder name and every part has its own open funder registry DOI, it is recommended that you tag the most specific funding source within <institution> and apply the funding registry ID (see below). One can always traverse the registry starting from a specific child to find any ancestors, but not vice versa.

[[Validator tool result: more than one <institution-wrap> within <funding-source> ERROR]]

7. **<institution>**. If the funder is not listed in any funding registry (or you do not know what it is) please include the name of the funder in <institution>, but if the funder registry details are included, please use the following tagging:
  - JATS 1.2 Use the vocab attributes on <institution-id> to identify a funding registry. For example, if you are using the Open Funder Registry and the <funding-source> is an institution contained within the registry an <institution-id> is required, with the following attributes:
    - i) @institution-id-type="doi"
    - ii) @vocab="open-funder-registry"
    - iii) @vocab-identifier="10.13039/open\_funder\_registry"

[[Validator tool result: if JATS 1.2 or later If @vocab="open-funder-registry" present then @vocab-identifier="10.13039/open\_funder\_registry" and @institution-id-type="doi" must be present ERROR]]

[[Validator tool result: if JATS 1.2 or later if @vocab="open-funder-registry" or @vocab-identifier="10.13039/open\_funder\_registry" then value of the element must start with "10.13039/" ERROR]]
  - JATS 1.1 @vocab attributes are not available, so if you are using the Open Funder Registry and the <funding-source> is an institution contained within the Open Funder registry, an <institution-id> is required, with the following attribute:
    - i) @institution-id-type="doi"

[[Validator tool result: @institution-id-type="doi" must contain a value which starts with "10." ERROR]]

8. **<institution-id>**. If you are using the Open Funder Registry, the value provided in <institution-id> should be the DOI (e.g. 10.13039/100000002) but while the content of the institution-id tag contains the DOI of the specific funder, it is not expected that the Funder DOI will be displayed (and so it does not affect the Crossref DOI display guidelines).
9. **<institution>**. If using a registry, the text within <institution> should contain one of the name labels available from the registry. For example, if using the Open Funder Registry, use the preferred or alternative label.

[[Validator tool result: institution name n/a in registry]]

10. **<award-name>** and **<award-desc>**. In JATS 1.3, <award-name> and <award-desc> are available in <award-group> for tagged additional funding such as <award-desc>Stanley Cohen Innovation Fund</award-desc> or <award-name>Graduate Fellowship program</award-name>. For JATS versions 1.2 and earlier, this content should be included outside of the <funding-group>. A looser, mixed content tagging model can be used within descriptive text that might appear in, for example, an acknowledgment section of an article.
11. **<principal-award-recipient>**. If a publisher provides named people/institutions associated with funding, only 1 person or organisation per <principal-award-recipient> is allowed, but <principal-award-recipient> may repeat in an award group.
12. **<contrib-id>** within <principal-award-recipient> or <contrib>. Use this element to contain a person's ORCID ID, or alternative identifier, if provided, with @contrib-id-type set to the ID-assigning authority; e.g., contrib-type="orcid".

Note: If the ORCID has been collected using a validation process, add @authenticated with a value of "true". If it has not been, use @authenticated with a value of "false".

13. **<funding-statement>**. If a narrative funding statement exists, it should be included in <funding-statement>.

## Examples

### JATS 1.2

```
<funding-group>
  <award-group id="ag1">
    <funding-source>
      <institution-wrap>
        <institution-id institution-id-type="doi"
vocab="open-funder-registry"
vocab-identifier="10.13039/open_funder_registry">
          10.13039/100006538</institution-id>
```

```

        <institution>School of Medicine, Vanderbilt
University</institution>
      </institution-wrap>
    </funding-source>
