**Notes:**

- **Assumptions:**
  - We will always have resource access whether or not we have the aggregated records in ERMS from SS.
  - We will be getting journal & eBook records from SS.

- **Issues:**
  - *There is a lag between turning on records in SS and when they appear in ERMS (up to 30 days)*
  - Journal information is available within the DB accessible through the resource record.
    - Should records from SS be more frequent?
    - What would be considered reasonable? (Keeping in mind that the information is still available through the DB - the aggregation is not there.)
  - +Not all records will go into SFX.

- **Decision Making group:**
  - When decision has been made to wait for SS to add records - how long do we wait?
    - How long is acceptable? (Keeping in mind that the information is still available through the DB - the aggregation is not there.)
  - ***Who should do? What are steps involved?***
